ABSTRACT

An athletic garment assembly for collecting urine during athletic activity includes a jock strap that may be worn by a user. The jock strap is structured so a crotch of the jock strap covers the user's genitalia when the user wears the jock strap. A funnel is coupled to the jock strap. The funnel engages the user's genitalia so the funnel may receive urine from the user while the user engages in athletic activity. A bladder is coupled to the funnel so the bladder may contain the urine.
